

# Customizable Air Shower

- Customized design and functions for various applications:
- Customization options include T-shaped, L-shaped, Z-shaped, U-shaped, and other shapes.
- Different materials and components can be tailored to meet specific requirements.
- Professional designers to maximize space utilization and usage efficiency.
- Achieve high effectiveness through optimized design.
- Material options include cold-rolled steel with powder-coated finish or stainless steel 304.

## Cutting-edge technology

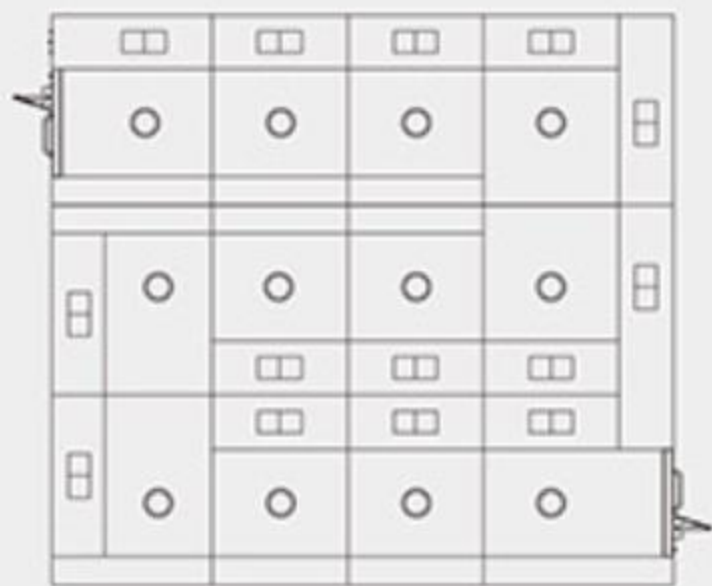

Our intelligent programmable control system, two-door electronic interlock mechanism, infrared sensing blow technology, clear indicator system, and emergency stop switch exemplify our dedication to professionalism, convenience, and security. These advanced features demonstrate our commitment to delivering a comprehensive solution that prioritizes efficient operations, user convenience, and utmost safety.

## Premium materials

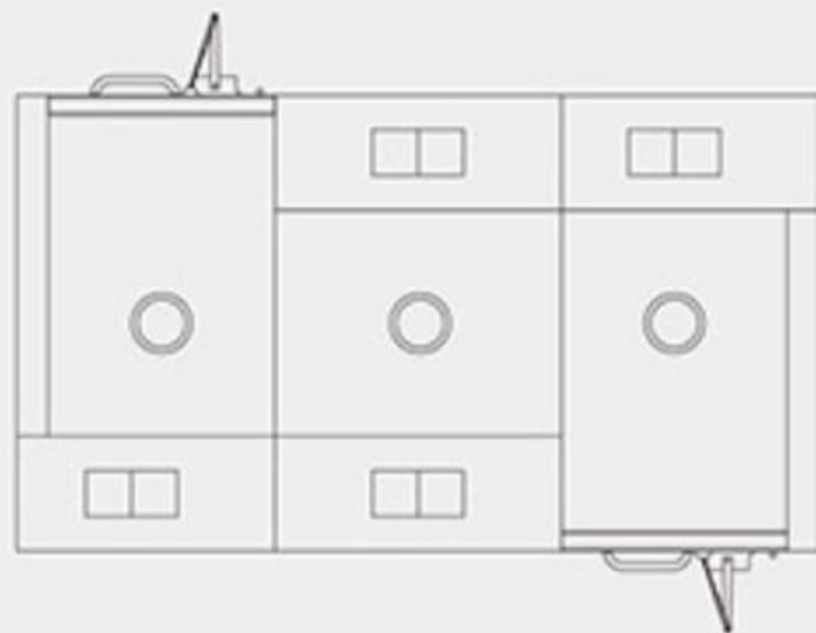

1. Our products are constructed using high-quality cold-rolled steel sheets with options for epoxy powder coating or stainless steel finishes.
2. The incorporation of wear-resisting ground steel plates and stainless steel nozzles ensures excellent corrosion resistance and rust resistance.

## Operational Framework

Air passes through pre-filter, static pressure box, and HEPA filter, delivering clean air through nozzles to remove surface dust. Return air with dust recirculates through pre-filter for repeated filtration.
